PROFESSIONAL SUMMARY

Computer Science Engineering graduate with experience in Python Machine Learning, Deep Learning, Scikit-learn and TensorFlow. Computer Science Engineering graduate has built models extracted features, pre-processed data, evaluated results and managed machine-learning projects, especially a project that uses audio fingerprinting in noisy settings. Computer Science Engineering graduate has a background in software development and a strong interest in applying AI and ML to real problems and in Generative AI.

EDUCATION

MET Institute of Engineering

Jun 2022 - Jun 2026

Bachelor of Technology in Computer Science
Engineering Nashik, Maharashtra, India

EXPERIENCE

Software Engineering Intern

May 2025 - Jul 2025

Arrow Technologies & Solution | IT Company | On-Site

Furniture Store | Full-Stack Developer

- Developed a full-stack furniture e-commerce site with React, Node.js, Express.js, and MySQL/MongoDB; built functions for product viewing, shopping cart, order handling, and stock monitoring.
- Created REST APIs including user login and distinct permission levels for admins versus normal users.
- Designed a responsive and user-friendly front end and better server speed for easier app use.

AI/ML & TECHNICAL SKILLS

- AI/ML:** Machine Learning • Deep Learning • CNN • Denoising Autoencoder • Feature Extraction • Model Training & Evaluation
- Python & ML Tools:** Python • NumPy • Pandas • Scikit-learn • TensorFlow • Programming: C++ • Java • Python • JavaScript
- Backend & Databases:** REST APIs • Node.js • MySQL • MongoDB • Cloud: Linux • AWS EC2

AI/ML PROJECT

ML-Based Audio Fingerprinting for Noisy Environments

- Developed an ML-based audio fingerprinting system to identify audio reliably in noisy and real-world environments.
- Built an end-to-end pipeline covering audio pre-processing, feature extraction, model training, fingerprint generation, hashing, matching and evaluation.
- Implemented deep learning approaches including CNN and Denoising Autoencoder to generate robust audio fingerprints across varying noise levels.
- Used Python, TensorFlow and Scikit-learn for pre-processing, model development and performance evaluation.
- Designed an efficient fingerprint hashing and matching mechanism for fast and scalable audio retrieval.

RELEVANT AI/ML KNOWLEDGE

ML Fundamentals: Supervised learning and unsupervised learning feature engineering, model evaluation, classification, preprocessing and data handling Deep Learning: CNNs and autoencoders | Workflow: Data preprocessing followed by feature extraction training and evaluation and matching.
